PROFESSIONAL SUMMARY

Software Developer at YRES building React frontends, REST APIs, and database-driven features for an educational platform serving thousands of users. Built a production N8N automation system of six workflows integrating the Claude API, Notion, and third-party job APIs, cutting a 90-minute manual process to 15 minutes. Works with LLMs, AI coding tools, Python ETL pipelines, and Power BI daily. Driven to eliminate manual friction and embed intelligence into real operations.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML5, CSS3

Automation & AI: N8N (design, deployment, admin), Zapier, Claude API, LangChain, LangGraph, RAG, MCP, Claude Code, Cursor

Backend & Frontend: Spring Boot, Node.js, Express, React, React Native, Firebase, REST APIs, JSON/XML

Data: pandas, ETL pipelines, Power BI, PostgreSQL, MongoDB, MySQL, SQL Server

Tools: Git, Maven, Jira, Linux CLI, Agile/Scrum

EXPERIENCE

Software Developer

Mar 2026 – Present

York Region Education Services (YRES)

Ontario

- Developing and shipping features across YRES's web platform: React frontends, REST API endpoints, and database queries supporting program registration, volunteer coordination, and camp management.
- Identifying operational bottlenecks and building software to automate them. Writing unit and integration tests, participating in code reviews, and maintaining technical documentation.
- Building data pipelines and reporting tools to surface enrollment metrics, volunteer data, and attendance insights for non-technical leadership.

Junior Service Technician

Oct 2024 – Sep 2025

Canada Computers & Electronics

Vaughan, ON

- Achieved 90% first-contact resolution by translating complex diagnoses into clear explanations for non-technical customers.
- Documented recurring incident patterns into structured guides, reducing team escalations by 20%.

Bookkeeper & Web Support Assistant

Jan 2024 – Oct 2024

Ilaxi's Food

Toronto, ON

- Automated weekly transaction reconciliation with a Python script, cutting processing time by 25%.
- Built a JSON/XML validation framework that caught data integrity issues before they reached downstream reports.

PROJECTS

AI-Powered Job Search Automation System

N8N, Claude API, Notion API, REST APIs, Zapier

- Built six connected N8N workflows: job fetcher, AI scoring engine (Claude API), referral matcher (Notion), cover letter generator, daily Gmail briefing, and error-handling with retry logic. Cut per-application time from 90 min to 15 min.

Calipher – MCQ Optimization Engine

Java, Spring Boot, REST APIs, JUnit

- Architected a modular RESTful microservice with a pluggable decision pipeline. Achieved 85% JUnit test coverage and validated reliability under concurrent load.

Customer Experience Analytics Dashboard

Python, pandas, Power BI, ETL

- Built an ETL pipeline to ingest, clean, and transform ~2,000 customer records into a Power BI dashboard with automated refresh workflows.

Movies Discovery Platform

Node.js, Express, PostgreSQL, MongoDB

- Built REST API endpoints across two data models with scalable query patterns and systematic API contract testing.

Low Ballers – Real Estate Analytics App

React Native, Firebase, REST APIs

- Integrated property listing APIs into a mobile app with automated comparison logic surfacing ranked pricing insights.

EDUCATION

Diploma in Computer Programming – Humber College

Expected 2026

Relevant Coursework: OOP & DSA (Java), Database Design (SQL), Software Testing, System Architecture

LEADERSHIP

Event Coordinator – Volunteer, BAPS Swaminarayan Sanstha

2022 – Present

Plan and coordinate large-scale community events, manage cross-functional volunteer teams, and adapt resource allocation in real time.
